

Activity 12: Portfolio Brief & Prompt Log

Rouhin Ghosh | 3rd Semester B.Tech CSIT, REVA University | Portfolio Building (B25CS0311)

Part 1 — Portfolio Brief

Who I am

I'm Rouhin Ghosh, a 3rd semester B.Tech CSIT student at REVA University, Bengaluru. Outside class I co-run FWE Studios, an agency that mixes video editing, VFX and motion design with an entrepreneurial approach to growth. I cut video for a living and for fun, and I'm now learning to build the software side properly: Git, GitHub, data structures and AI projects. This portfolio page is meant to put my creative work and my code in one place so both are visible.

What I built

- **VisionAI** — a real-time navigation assistant for visually impaired users, built at a hackathon. It detects what's ahead and speaks guidance in English, Hindi, Kannada and Bengali. Built with YOLOv8, Flask, React Native and multilingual text-to-speech. I also prototyped a browser version with TensorFlow.js and the Claude API.
- **Heart Disease Prediction** — a machine-learning model that predicts heart disease from patient data.
- **2D Graphics Editor** — a 2D graphics editor built as a hands-on programming project.
- **hello-world repo** — my first GitHub repository, where I set up VS Code, Git and GitHub end to end. github.com/MrRouhin/hello-world
- **Pair-programming log** — a collaboration log from a pair-programming session, using GitLens and Live Share to work in the same codebase.
- **leetcode-solutions repo** — my LeetCode practice repository, with solutions and progress documented as I go. github.com/MrRouhin/leetcode-solutions

Other things worth mentioning

- Co-founder and Operational Manager, FWE Studios (since Jan 2025).
- Official video editor, REVOTHSAVA 2026.
- Profiles: GitHub (MrRouhin), LinkedIn (Rouhin Ghosh), HackerRank for practice.

Skills

- **Video and motion:** Adobe Premiere Pro, After Effects, DaVinci Resolve, Blender, visual effects, motion graphics, Lightroom.
- **Code and data:** C, HTML, CSS, JavaScript, MySQL, Flask, YOLOv8, React Native, TensorFlow.js, Git and GitHub.
- **Business:** online lead generation, B2B marketing, sales.

A goal

I want to grow FWE Studios while becoming a solid full-stack and AI builder, so creative work and engineering end up in the same toolbox. VisionAI was my first real project in that direction, and I want to build on it rather than treat it as a one-off.

Part 2 — The Generation Prompt

This is the brief above, rewritten as one structured prompt — this is what actually gets submitted to the AI assistant, not the brief itself.

Build a one-page personal portfolio site for me as a single self-contained HTML file. Here's who I am and what to include: Name: Rouhin Ghosh. 3rd semester B.Tech CSIT student at REVA University, Bengaluru, and co-founder of FWE Studios (video editing, VFX and motion design). Sections needed: About, Projects, Skills, Contact. About: a short bio (3-4 sentences) — a video editor and agency co-founder who is learning to build software properly (Git, GitHub, data structures, AI projects like VisionAI), with a goal of growing FWE Studios while becoming a solid full-stack and AI builder. Projects (list these, each with one line, pulled from my actual work — do not invent project names or descriptions): VisionAI (real-time navigation assistant for visually impaired users, hackathon project; YOLOv8, Flask, React Native, multilingual TTS); Heart Disease Prediction (ML model); 2D Graphics Editor; hello-world (my first repo) — <https://github.com/MrRouhin/hello-world>; Pair-programming log (GitLens and Live Share); leetcode-solutions — <https://github.com/MrRouhin/leetcode-solutions>. Skills: Premiere Pro, After Effects, DaVinci Resolve, Blender, VFX, motion graphics, Lightroom; C, HTML/CSS/JavaScript, MySQL, Flask, YOLOv8, React Native, TensorFlow.js, Git/GitHub; lead generation, B2B marketing, sales. Contact: my LinkedIn link, with my GitHub and HackerRank profiles mentioned. Tone: professional but approachable, not corporate or stiff. Style: give it a video-editor feel rather than a generic resume template — an editing-timeline look with a ruler and playhead, and sections laid out like tracks. Support light and dark mode. Don't invent any projects, stats, or links beyond what I've given you above.

Part 3 — Prompt Log

FILL IN: This section must record the prompts you actually sent and what actually changed. Replace each bracket below with your real entries from your own AI session.

Prompt 1 (initial generation) — the structured prompt above, submitted in full.

Result: [Describe what the first version looked like and which sections or links it got right.] Review step: [What did you check? For example, that every link matched a real repo and no project was invented.]

Prompt 2 (refinement): "[Paste your exact follow-up prompt.]"

What changed: [Describe the actual change that came back.]

Prompt 3 (refinement): "[Paste your exact follow-up prompt, if you sent one.]"

What changed: [Describe the actual change that came back.]

Part 4 — Reflection

FILL IN: Write 4-6 sentences in your own words. Suggested points: (1) which refinement made the biggest difference to the page and why; (2) one thing the AI got wrong or over-claimed that you caught in review; (3) what you would put in or leave out of the next brief.

[Your reflection here.]
